

Preparation Instructions: Carpenter Ants

Carpenter ants are a nuisance and a threat to the structure of buildings. As wood destroying organisms, they have the ability to create small tunnels in wood and create big problems over time. In order to allow your technician to complete your service fully, please read through the preparation instructions below and follow them fully.

- Pull all items at least 2 feet away from walls in your home.
- Fish tank filters should be turned off and removed, and tanks should be covered during your appointment.
- Birds or reptiles should be removed from your home or apartment during the appointment, and should not come into contact with furniture, walls, floors, or any surfaces that may have been treated for at least 1 year from the final treatment.
- Please prepare to vacate your apartment during your appointment, and for 4 hours afterward. Any pets you may have, excluding fish, must vacate and not return until 4 hours afterward as well.

Please know that this service takes time to work. If you still see carpenter ants in your apartment 1 month after your appointment please contact your property manager and additional steps can be discussed.

Thank you for choosing Halt Pest Control to protect your property!
